I took sekukanimab for my skin flares, and after some days, I was just feeling weird all over. Like first it was my stomach not settling and then my head feeling foggy or something, kind of like Aahay? I don't know if it's good or the shot, but I didn't feel right. Also, I think my rash got better but then came back on my legs.

I have been on Cosentyx for 6 weeks for my psoriasis. After the second dose, I experienced mild swelling in my ankles, and shortness of breath while walking. These symptoms began approx. 2 days after the injection and lasted for about 2 weeks.
